

►  **Analytica 2018, Munich**
10.04. - 13.04.2018

1,164 exhibitors from 49 countries provided information on new trends and developments at the world's most important trade fair for laboratory technology, analytics and biotechnology. Despite the glorious sunshine, the numerous trade visitors provided for full halls and drove the number of visitors to a new record. G.RAU GmbH & Co. KG also benefited from this.

This year, with our own booth in Hall A, the course was set for numerous informative discussions around the subject of innovative metals.

Our exhibits, with focus on precision tubes made from special materials such as titanium, nickel-free stainless steel or superelastic Nitinol, have been specifically selected to meet the needs of the analytics and laboratory technology industry: very thick-walled capillary tubes with especially smooth inner surfaces. These are in the OD range of 1.50 mm with a wall thickness of around 0.60 mm.

We are looking forward to the Analytica 2020!

Report: Mr. Marcel Kull

G.RAU GmbH & Co. KG, with more than 600 employees and three production sites in Pforzheim as well as a subsidiary in the USA and Costa Rica, is a worldwide known supplier for the electronic and automotive industry, measurement and control technology and medical engineering. G.RAU processes and refines far more than 200 various kinds of metals and metal alloys into products. This makes G.RAU an expert in the manufacturing of strips, tubes and wires made of precious metals, special alloys and composite materials. In addition, G.RAU also use these prematerials to manufacture precision parts and complex assemblies.

G.RAU is also the parent company of several well-known companies, such as the two Pforzheim-based enterprises EUROFLEX GmbH and ADMEDES GmbH. Both companies are global market leaders in their respective product areas.
